DETAILED ACTION

Examiner's Statement of Reasons for Allowance

1. Claims 1-34 are allowed over prior art.
2. This action is in reply to applicant's correspondence of 03 September 2008.
3. The following is an examiner's statement of reasons for the indication of allowable claimed subject matter.
4. As per claims 1 and 17 generally, prior art of record, Forbes et al, U.S. Patent 6,381,742 B2, fails to anticipate, disclose, teach or suggest alone, or in combination, at the time of the invention, the features as set forth in the claims in this application as allowed, and not necessarily as summarized and/or characterized by the examiner, whether or not as italicized, as discussed and remarked upon in the response of 03 September 2008 to office action of 03 June 2008.

Specifically, (as per claim 1, for example) prior art dealing with various aspects of systems that run multiple applications (often for a single user running unrelated applications scenarios), across independent systems/disparate workstations, utilizing multiple, often different operating systems (i.e., scenarios that require system architectures that require system virtualization with high degrees of both isolation and efficiency (e.g., Hypervisors), alternatives utilizing resource containers and security containers applied to general-purpose, time-shared operating systems exist, such as the Linux-VServer; Soltesz, S., et al, 'Container-based Operating System Virtualization: A Scalable, High-performance Alternative to Hypervisors', SIGOPS Oper. Syst. Rev., Vol. 41, No. 3. (June 2007), pp. 275-287, entire article, <http://delivery.acm.org/10.1145/1280000/1273025/p275-soltesz.pdf?key1=1273025&key2=0279528221&coll=GUIDE&dl=GUIDE&CFID=13091697&CFTOKEN=46675559>), is generally known per se. Nowhere in the prior art is found collectively the *italicized* claim

elements (i.e., the various aspects of applications software not being sharable between the plurality of secure (and isolated) containers of application software, and unique root file systems different from an operating system's root file system, so as to allow for different versions of the same operating system running on the same system/server environment), at the *time of the invention*, serving to patently distinguish the invention from said prior art;

“1. In a system
having a *plurality of servers* with
operating systems that differ,
operating in
disparate computing environments,
wherein each server includes
a processor and
an operating system including
a kernel
a set of associated local system files
compatible with the processor,
a method of providing at least some of the servers in the system with
secure, executable, *applications*
related to a service,
wherein the applications
are executed in

a secure environment,
wherein the *applications each* include
an object *executable by*
at least some of the different operating systems
for performing a task
related to the service,
the method comprising:
storing in memory *accessible to at least some of the servers*
a plurality of secure containers of application software,
each container comprising
one or more of the *executable applications* and
a set of *associated system files*
required to execute the one or more *applications,*
for use with *a local kernel*
residing permanently on
one of the servers;
wherein the set of *associated system files*
are *compatible with*
a local kernel of
at least some of the *plurality of different* operating systems,
the containers of
application software

excluding a kernel,
wherein some or all of the *associated system files*
within a container stored in memory
are utilized *in place of*
the associated local system files
that remain resident on the server,
wherein *said associated system files*
utilized in place of
the associated *local system files*
are copies or modified copies of
the associated *local system files*
that remain resident on the server, and
wherein the *application software*
cannot be shared between
the plurality of secure containers of application software, and
wherein *each of the containers has*
a unique root file system
that is different from
an operating system's root file system."
